# JULY. *VII Month.*

The *Flow'ry Tribes*, in all their bright Array,
Their lovely Forms and dazzling Hues display.
Ye fruitful Branches! white with vernal Bloom,
In rich Oblations breathe your fresh Perfume.
Praise him, ye *Plants!* with all your sweet Supplies;
Ye od'rous *Herbs*, in grateful Incense rise.
*Insects!* that creep on Earth, or spread the Wing,
In Troops your tributary Homage bring.

Fowls

he had given a Sun and planetary System within the Globe of the Earth, and intended it for our Use. But, to return, if there are Inhabitants in *Saturn*, which I know no Reason we have to doubt, their five Moons must not only be of vast Use in increasing their Light, which at that Distance can never, at mid Day, be so bright as our Twilight, but must likewise afford them great Entertainment in observing them as they rise, sometimes altogether, sometimes separately, and as they eclipse one another in their Revolutions. The Sun must appear to the Inhabitants of *Saturn*, if their Eyes are like ours, 100 times less than it does to us, or about twice as big as the Planet *Venus* does to our naked Eyes, when she is at the Brightest. Therefore the warmest Region in this Planet must, if there be no Provision for qualifying it, be colder than it is in *Greenland*. So that if the Earth were removed to the Distance of *Saturn*, all the Fluids upon it must be turned into Ice, as under the Poles, without a Possibility of ever returning to their fluid State, but by the Force of Fire. Neither *Mercury*, *Venus*, the Earth, the Moon, nor *Mars*, can be seen at the Distance of *Saturn* by such Eyes as ours, unassisted by Instruments.

It may be just proper to mention, before I conclude this brief Account of the planetary System, that the direct, stationary, and retrograde Motions of the superior Planets, *viz.* *Mars*, *Jupiter* and *Saturn*, that is, their appearing
